Covid-19...Care & Cleaning Checklist

for Hygienic Drinking Fountains & Bottle Fillers.

Frequent Cleaning Routine Recommended.

Water Flow

- ◆ Check Water Bubblers are flowing freely & water lifts at least 10cms above the water spout outlet.
- ◆ The height of the water stream is important to keep mouths away from the metal parts & water bottles away from the nozzle or water outlet when refilling
- ◆ Test the water flow for 10 seconds to allow fresh, clean water to come through prior to drinking.
- ◆ If the fountain requires you to push a button or lever, clean the surface before & after use or use your elbow to depress the button.

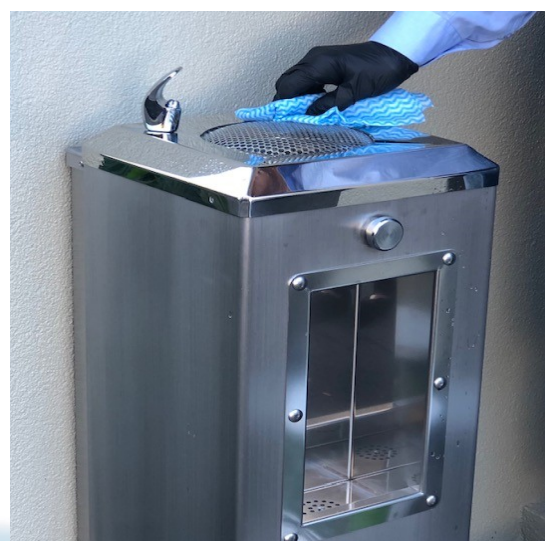

Maintenance

- ◆ Adjust Bubblers to achieve good water flow height. Use the valve on the drinking fountain bubbler to adjust the rate of water flow.
- ◆ Phone for Maintenance advice to 0800 473 487.
- ◆ Check Drains are clear & flowing away freely. Contact your Plumber if required.
- ◆ Carry out more frequent cleaning of your drinking fountains after usage.

Care & Cleaning

- ◆ Stainless Steel Soap Non-Scouring Pad to clean & remove scale build up & debris from the Basin & Bubblers.
- ◆ Stainless Steel Surfaces & Bubblers. Clean Bubbler Buttons & Bowl with food safe disinfectant/detergent & a soft cloth. Clean after usage throughout the day.
- ◆ Non-abrasive cleaning products on all other surfaces.
- ◆ Clean hands with an alcohol based rub or wash hands with soap & water for 20 secs.
